

# INOVA ADVANCED IMAGING CENTER

Healthcare  
Construction

Alexandria, VA  
7,200 sf

ADI Construction completed the complete renovation of office space into a high-end medical imaging center. Construction included all new mechanical systems and electrical service. Work required extensive structural modifications to support the weight of the new equipment, including a 17,000 lb magnet. With a relatively low bar joist height, this required careful coordination of above ceiling work. Careful selection of finishes were used to create a calming atmosphere for the patients. This included Earth tones on walls and flooring, a water feature in the hallway, and lighted landscape murals in the CT and MRI ceilings.
